>
> The pool of academicians and researchers in the nuclear science and engineering is gradually shrinking. The end of cold-war and no substantial growth in the nuclear power industry are deterring our young scientists and engineers from pursuing the nuclear science and engineering fields. Also, scientific advancements in these areas require comprehensive multidisciplinary education and research at the cutting edge of science and technology. The proposed GAANN Fellowship program addresses the critical need for human resources in the multidisciplinary field of nuclear science and

engineering. The prestigious GAANN fellowships will lead to the induction and nurturing of a talented cadre of outstanding scientists and engineers in this critical area of research and education, thus contributing to the pool of academicians who will serve as role models for future nuclear scientists and engineers.
