**Subject:** Equipment has been moved to the 40' container car

Hi George,

I inspected the lab last evening, and I am quite sure that all of the equipment that had been stored in the Ag Engineering building has been moved to the 40' container car at South Farm. If any of you would like to check, please do take a walk through the lab.

The container car is full. Quite full. I would be careful when opening the door. At the same time, we have not placed a lock on the container car, as we thought that the faculty in Nuclear Engineering would like to do this.

Thanks for your patience while making the move.

Best regards,

Leon
